

RQ3: How do security mechanisms in coding agent harnesses affect security and utility?

HarnessSecurity-Bench (§ 5)

Step1: Task Construction

1. Open-Source Tasks
2. Manually Curated Tasks

Inject Adversarial Artifacts

Step2: Attack Surface Augmentation

1. Repository Artifact
2. Instructions / Skills
3. Tool Interfaces
4. Knowledge & Memory
5. External-Content

Step3: Harness Execution

Step4: Oracles

1. Utility Oracles: Task completed?
2. Attack-Effect Oracles: Did the attack succeed?
